Sumitomo Metal Mining Enhances Visibility in the Copper Cathode Supply Chain

MineHub Adoption Enables Real-time Shipment Tracking

Tokyo, Japan – Sumitomo Metal Mining Co., Ltd. (TSE: 5713) has adopted MineHub platform, a supply chain visibility platform provided by MineHub Technologies Inc., a Canada-based company, for the sale of copper cathodes produced at Sumitomo Metal Mining's Toyo Smelter & Refinery in Saijo, Ehime Prefecture, Japan.

With the adoption of this platform, shipment information — including the location of vessels in transit — can now be monitored in real time by both customers and Sumitomo Metal Mining, offering greater traceability. In addition, this will help digitalize and improve the efficiency of Sumitomo Metal Mining's logistics management operations.

Sumitomo Metal Mining is also considering the adoption of MineHub for products other than copper cathodes, raw materials and other materials, and will continue to promote the use of digital technologies to enhance customer value and improve operational efficiency.
